EXAMINER'S AMENDMENT

The amendment filed on April 12, 2007, has been received and entered.

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

An extension of time under 37 CFR 1.136(a) is required in order to make an examiner's amendment which places this application in condition for allowance. On September 10, 2007, an extension of time for 5 MONTH(S) was requested and the applicant authorized the Director to charge Deposit Account No. 19-1090 the required fee for this extension.

Authorization for this examiner's amendment was given in a telephone interview with Stephen J. Rosenman on September 7, 2007.

The application has been amended as follows:

In the claims:

Claim 16 has been replaced with the following:

16. A purified gellan composition containing nucleic acid at a concentration of less than 10 ppm based on the weight of gellan prepared by combining DNase and an unpurified gellan composition contaminated with nucleic acid to make a mixture wherein said mixture is maintained under conditions such that DNase degrades at least some of the nucleic acid, thereby resulting in the purified gellan composition.

- New claims 55-67 have been added:

55. The purified gellan composition of claim 16 wherein the concentration of nucleic acid in the unpurified gellan composition is more than 100 ppm based on the weight of gellan.

56. The purified gellan composition of claim 16 wherein the purified gellan composition contains less than 50% of the nucleic acid in the unpurified gellan composition.

57. The purified gellan composition of claim 16 wherein said mixture further comprises a DNase activating agent.

58. The purified gellan composition of claim 57 wherein the DNase activating agent is sodium azide.

59. The purified gellan composition of claim 16 wherein said mixture is maintained at 30-45°C for at least 1 hour.

60. The purified gellan composition of claim 16 wherein in preparing the purified gellan composition, nucleic acid degradation is monitored.

61. The purified gellan composition of claim 16 wherein after the mixture is maintained under conditions such that DNase degrades at least some of the nucleic acid, the DNase is deactivated.

62. The purified gellan composition of claim 61 wherein the DNase is heat deactivated by heating the DNase to an inactivating temperature in excess of 50°C.

63. The purified gellan composition of claim 16 wherein the DNase is DNase I.

64. The purified gellan composition of claim 16 wherein in preparing the purified gellan composition, boric acid is added to the unpurified gellan composition or the purified gellan composition.

65. The purified gellan composition of claim 16 wherein in preparing the purified gellan composition, imidazole is added to the unpurified gellan composition or the purified gellan composition.

66. The purified gellan composition of claim 16 wherein in preparing the purified gellan composition, a size-separation property modifying polymer is added to the unpurified gellan composition or the purified gellan composition.

67. The purified gellan composition of claim 66 wherein the size-separation property modifying polymer is poly(ethylene oxide).
